National Bioinformatics infrastructure Sweden (NBIS)

Introduction To Bioinformatics Using NGS Data

01-Feb-2022

Enable world-class life science research and maximise scientific and societal impact of collected data by:

- Providing Providing expert knowledge, innovative data integration, advanced training, efficient data publication for open science, and access to high-performance data analysis methods
- Coordinating bioinformatics support within Sweden and making bioinformatics easily accessible for life science researchers
- Swiftly responding to changes in support needs as new techniques are developed and utilised
- Forming the Swedish ELIXIR node and participating in relevant international projects

Services

NBIS

Topics

- Genomics/NGS/Metagenomics
- Genome annotation and assembly
- MS-Proteomics and Protein bioinformatics
- Systems biology and Metabolomics
- Integrative bioinformatics
- Biostatistics
- Data publication and FAIRification of data
- Data management and Data stewardship
- Computational structural and chemical biology

Support

- Drop-Ins
- Consultation
- Short and medium term support (Fee based)
- Long term support
- Partner projects
- Bioimage informatics

Infrastructure

- Computational resources
- Data management

- 267 PIs (104 female, 163 male)
- 212 active projects
- 104 consultations
- ~13 workshops

nbis mission funding sources part of scilifelab part of elixir nbis locations, map nbis units - support, infrastructure, training

support stats

support

- consultaion
- sms
- long-term
- partner
- bioimage bioinformatics
- focus areas

training

- workshops
- advisory program

infrastructure

- repositories
- hosting

compute and storage snoc, uppmax, hpc

data management

- data centre
- data stewards, fair data
